

ABSTRACT OF THE DISCLOSURE

Speech recognition technology is used to review voice communications directed to a party for targeted information (e.g., telephone number, URL, e-mail address) and, if the information is identified, the party may invoke a connection  
5 option and/or delivery option as may be appropriate. Connection options enable the party to initiate a connection (or “call,” in the case of a telephone number) to a communication device associated with the targeted information. Delivery options enable the party to receive a text message including the targeted information.
